To Whom it may concern

Leighton (CPB) contractors engaged Gearon Civil to deliver civil works for the Webb Dock West Automotive terminal in 2014.

The scope comprised impact rolling, earthworks, and pavement construction over an area of approximately 280,000m² and required a particularly high standard of engineering and quality assurance reporting.

Gearon Civil also assisted us in dealing with impacted soil in a cost effective and safe manner.

They successfully completed the project on time and worked cooperatively with our team.

The supervisory team was well organised and coordinated the works well. The site crew approached the work with a positive, safe, and above the line attitude.

I would recommend Gearon Civil for similar civil projects We were very pleased with the success of the project and continue to use Gearon on other projects. It is a pleasure working with them.

Regards

David Houlihan
